

PRODUCT OVERVIEW

Camera Mirror Systems

A pair of exterior camera modules feeds two portrait displays in the driver's cab. We plan camera and screen positions around the vehicle, then install and commission the complete camera mirror system.

Illustrative equipment. The final selection and specification are agreed for your vehicle.

Camera modules on both sides

Compact exterior units provide the side views required by the agreed vehicle specification.

Portrait driver displays

Two narrow displays present the side views in the cab. Position, visibility and driver use are part of the installation review.

Integration and upkeep

SURE plans mounts, power and cabling, checks the installed views and supports the system in service.

SPECIFICATION CONVERSATION

What we agree with you

Core system	Two exterior camera modules, two portrait driver displays and the required cabling.
Field of view	Agree the required mirror views and assess any additional front or close-proximity view options.
Weather and visibility	Review camera heating, lens protection and display brightness for the selected system.
Vehicle application	Confirm mounting, vehicle interfaces and approval documents for the exact equipment and installation.
Separate detection product	Pedestrian and cyclist detection with driver alerts is available separately. It is not included by default in the camera mirror system.

Before installation

Confirm vehicle compatibility, mounting positions, power and network interfaces, commissioning checks, handover and ongoing support. Features depend on the selected equipment and service.

Pedestrian and cyclist detection is a separate product. Required views and approval documents are reviewed for the exact system and vehicle.

Plan your next step

Share your vehicles, current equipment and priorities with the SURE team.
